

## Assignment 5 Create the gg scheme and DB tables, and insert data

This assignment intends to help you understand how to set up the Apache web server and MySQL server on either Windows or Mac OS, how to create a scheme and DB tables on phpMyAdmin, and how to insert data into each table on phpMyAdmin.

1. The first step is to create the gg scheme on phpMyAdmin.
2. Create 5 DB tables such as employee, gg\_service, owned\_property, owner, and property\_service.
3. Insert data into each DB table. You can find the DB structure and data on slide numbers 16 through 20 in Lecture 7.
4. Once you are done with the first steps above, please export the gg scheme. You can do this job by clicking the Export menu shown in Figure 1 below.

5. Go to your download folder and find the `gg.sql` file. After that, turn it in.
